Introducing Secure Data.

Comprehensive Data Security for Office 365

Who We Are

At Murdoch Webster, we're passionate about humanising technology and understanding the unique challenges our clients face. We're raising the bar across cybersecurity and infrastructure services, upholding the highest standards in everything we do.

No jargon, just straightforward IT solutions designed with your team's goals in mind.

With best-in-class data protection, Secure Data safeguards your entire Office 365 suite—from MS Teams and Outlook to Excel and Word. Secure Data delivers peace of mind knowing that your critical information is 24/7 protected, easily accessible, and fully compliant with industry standards. Focus on growing your business while we expertly manage the security posture of your data.

Cloud Data Security as a Service

Safeguard & bulletproof your critical business conversations.

1. Immutable Cloud Data Protection

Your data in flight or at rest is encrypted, protected and monitored, whether it's being used or stored. This means it stays safe from threats and tampering, giving you peace of mind.

2. Advanced Ransomware Defense

If ransomware hits, Secure Data steps in fast, defending downtime and data loss so you can get back to business quickly.

3. Granular Data Management

Set who gets access to what with simple, precise controls. Keep your sensitive info in the right hands and reduce the risk of mistakes or unauthorized access.

4. 24/7 Monitoring

Threats don't take breaks, and neither do we. Our round-the-clock monitoring catches issues as they happen, keeping your data secure at all times.

5. Flexible Data Recovery

Lost something important? No worries—Secure Data lets you restore your info quickly, whether it was deleted by mistake or affected by a cyberattack.

6. Scalable, Budget-friendly Protection

Scale your cloud data protection capabilities as your budget and requirements evolve—without compromising on quality.

The Ultimate Solution for Data Protection

Relying on Microsoft's built-in protection leaves your business exposed. Secure Data fills the gaps with comprehensive protection beyond what Microsoft 365 offers.

User Error Safeguards

Microsoft 365's limited recovery options can lead to permanent data loss from accidental deletions or overwrites. Secure Data provides continuous, point-in-time backups with unlimited retention, ensuring that even the most minor mistakes are easily reversible.

Ransomware Resilience

Microsoft 365 lacks strong ransomware recovery. Secure Data provides rapid detection, secure cloud storage, and quick bulk recovery, helping your business swiftly resume operations after an attack.

Compliance Confidence

With Microsoft 365's limited retention policies, maintaining compliance is a challenge. Secure Data ensures you meet all regulatory requirements with flexible retention options and detailed audit trails.

Comprehensive Legal Hold

Microsoft 365's eDiscovery and legal hold features can be lacking. Secure Data integrates with third-party tools, ensuring complete data collection and retention without disrupting operations.

Internal Threat Mitigation

Departing employees can risk critical data. Secure Data continuously captures and isolates it, ensuring thorough investigations and recovery from internal threats.

Delivering Data Protection across your Essential 8 Strategy

Prevent Attacks

Patching Applications

No more manual updates—Secure Data's Cloud Data Protection service eliminates any patch management requirements eliminating the risk of vulnerabilities in your environment.

Limit Attack Impact

Patching Operating Systems

Delivered as cloud service, Secure Data removes the responsibility of patching and maintaining infrastructure and operating environments.

Limit Attack Impact

Multi-Factor Authentication (MFA)

By integrating with your existing SSO and MFA systems, Secure Data delivers robust authentication protection out of the box.

Limit Attack Impact

Restricting Admin Privileges

Granular admin control ensure that only essential personnel can access critical functions, reducing the risk of unauthorised manipulation.

Prevent Attacks

Application Control

The Secure Data platform is hardened in the cloud providing granular and robust controls, only for those who need it.

Prevent Attacks

Backups

With Secure Data's automated cloud backups, your Office 365 data is securely stored and immutable, protecting it from unauthorised modifications or tampering.

Secure Your Data. **Affordably.**

Scale your cloud data protection capabilities as your budget and requirements evolve – zero compromises.
